1. Have you read, understood and accepted the above conditions and do you give your consent to participate in this study?

2. Which of the following best describes your professional background?

3. How would you describe your level of familiarity with Natural Language Processing (NLP) or Large Language Models (LLMs)?

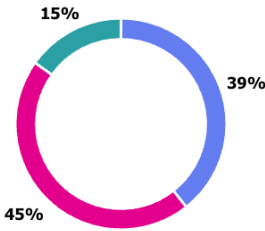

4. To what extent do you consider financial news sentiment to be a driver of short-term stock price movement?

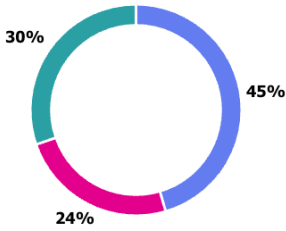

5. How do you evaluate the usefulness of automated sentiment analysis of financial news for investment decision-making?

Very useful	13
Somewhat useful	15
Not very useful	5
Not useful at all	0

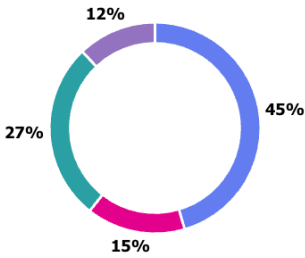

6. Have you ever used or considered using AI or NLP tools for financial analysis or investment research?

Yes, I have actively used such tools	15
Yes, I have considered it but not used them	8
No, but I am aware such tools exist	10
No, I am not familiar with such tools	0

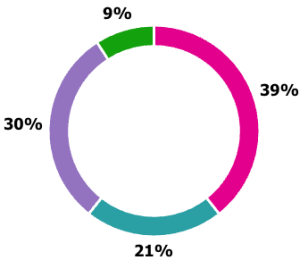

7. Which type of model do you think would perform more effectively for financial sentiment analysis?

A model specifically trained on financial text (such as FinBERT)	15
A general-purpose large language model (such as Llama, Mistral or Gemma)	5
Both approaches would perform equally	9
I do not have sufficient knowledge to judge	4

8. How do you evaluate the reliability of AI-generated sentiment signals for predicting short-term stock price movement?

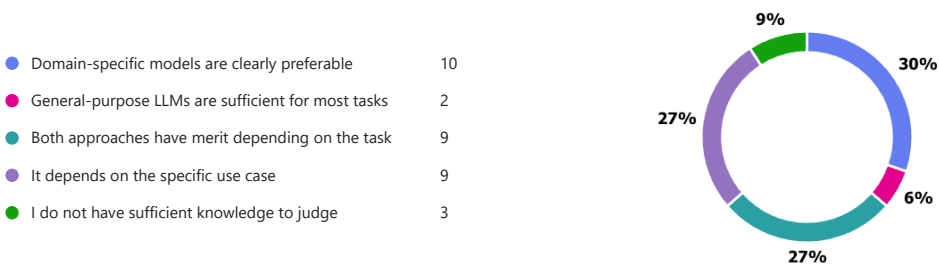

Highly reliable	0
Somewhat reliable	13
Neither reliable nor unreliable	7
Somewhat unreliable	10
Not reliable at all	3

9. In your view, what represents the most significant limitation of applying LLMs to financial sentiment analysis?

10. To what extent do you consider domain-specific AI models trained on financial text to be preferable over general-purpose large language models for financial analysis tasks?

11. To what extent do you consider the sentiment extracted from a single financial news headline to be sufficient for predicting next-day stock price movement?
